

## Where can I find out information about one of my friends?

Information about a friend can be found by using the Eagle Search utility. Just type in your friends name and hit enter. That should bring up everything that is on the site pertaining to that name. Don't put in John P. Barley for the search criteria though unless you are trying to narrow the results down. And don't put in something like "John" and expect to get a short list.

If that doesn't work...then login to the site.. go to the members list... select the year that John graduated and then select his name from the list. After that you can request to make a connection to him. You can find out how to do that [here](#) .
